(54) VIDEO GAME DEVICE AND COMPUTER READABLE MEDIUM WITH VIDEO GAME PROGRAM STORED

(57)Abstract:

PROBLEM TO BE SOLVED: To display a player character's figure and a visual field range on a monitor, regardless of the existence of a wall or a floor for dividing game space, in the case of indicating the game space as a bird's-eye view.

SOLUTION: A game implementation part 31 issues an instruction to a player character image data generation part 32, regarding the display position of a player character. A background image data generation part 37 generates background image data for showing a game space background made of a floor and a wall as a bird's-eye view. A player character position specifying part 34 checks the player character display position for coming behind the wall or the floor in the game space background image. Furthermore, an image composing part 38 composes the image data of the player character with the game space background image. Also, the player character position specifying part 34, upon judgement that the player character display position comes behind the wall or the floor hiding the player character, into a translucent status to show space behind the wall or the floor.
